In this picture, two green paths always give same answer

$$x, y \in \mathbb{Z}_N$$

$$(N = p \cdot q)$$

CRT way of computing  $x + y \bmod N$

$$\begin{array}{ccc} x & \longrightarrow & (x \% p, x \% q) \\ + \quad y & \longrightarrow & (y \% p, y \% q) \\ \hline Z & \xleftarrow{\text{chinese()}} & (x+y \% p, x+y \% q) \end{array}$$

CRT way of computing  $xy \bmod N$

$$\begin{array}{ccc} x & \longrightarrow & (x \% p, x \% q) \\ * \quad y & \longrightarrow & (y \% p, y \% q) \\ \hline Z & \xleftarrow{\text{chinese()}} & (xy \% p, xy \% q) \end{array}$$

CRT way of computing  $c^d \bmod N$

$$\begin{array}{ccc} c & \longrightarrow & (c \% p, c \% q) \\ \downarrow \text{exponentiate} & & \downarrow \\ c^d & \xleftarrow{\text{chinese()}} & (c^d \% p, c^d \% q) \end{array}$$

RSA:

$N$     $p$     $q$     $\underline{e \ d}$     $\varphi$     $m$     $c$

$p, q$  primes (distinct)

$$N = pq$$

$\varphi$  is Euler's totient function

$$\varphi(N) = (p-1)(q-1)$$

$e, d$  exponents:  $ed \equiv_{\varphi(N)} 1$

RSA       $m \longrightarrow m^e \bmod N$

inverse       $c \longrightarrow c^d \bmod N$
